Summary

Backend Software Engineer working with **TypeScript, Node.js and Go** on a consumer app with **100K+ daily active users**. Built a backend-for-frontend platform, authentication and distributed caching systems.

Experience

HaBuild Jun 2025 – Present
Software Engineer (Intern to Full-time) Bengaluru, India

- Built a **backend-for-frontend (BFF) platform for server-driven UI** with TypeScript, NestJS and MongoDB, plus an admin authoring interface. Added API aggregation, attribute targeting and SDK compatibility checks so product can update mobile screens without an app release.
- Implemented **Git-like version control** for screens: drafts, **three-way rebasing**, field-level conflict resolution and reverts. Used compare-and-swap with MongoDB transactions to prevent stale drafts from overwriting newer changes.
- Built **cross-environment configuration promotion** with live diffs, selective changes and dependency remapping, allowing teams to preserve target-environment hotfixes; rejected stale previews before applying changes.
- Halved PostgreSQL read latency from **200 to 100 ms** with read replicas and Redis caching. Resolved a separate **30K+ reads/second Redis hot key** by adding per-process in-memory caching ahead of Redis.
- Hardened a production **Go/Gin analytics pipeline**: JWT validation, rate limiting and OpenTelemetry tracing; added graceful shutdown, idempotent writes, retries and dead-letter handling to its **SQS consumer**.
- Closed **insecure direct object reference (IDOR)** vulnerabilities with ownership checks across **5 core services**, including payments and subscriptions; hardened shared JWT authentication across **6+ services**.
- Integrated third-party SMS, WhatsApp and email OTP providers with automatic cross-channel fallback, improving delivery success from **96% to 98.4%** and reducing failed deliveries by **60%**.

Technical Skills

Languages: TypeScript, Go (Golang), JavaScript, SQL, C++, Python, Java
Backend: Node.js, NestJS, Express.js, Gin, REST APIs, Microservices
Data & Messaging: PostgreSQL, MongoDB, Redis, Apache Kafka (Confluent), AWS SQS
Tools & Security: Docker, GitHub Actions (CI/CD), Git, Linux, OpenTelemetry, JWT, OAuth 2.0

Education

Indian Institute of Information Technology, Nagpur Nov 2022 – May 2026
B.Tech in Electronics and Communication | GPA: **8.16**
Coursework: Data Structures and Algorithms, Operating Systems, DBMS, Computer Networks, OOP

Competitive Programming

Codeforces: Expert (peak rating **1605**) | **CodeChef: 4 Star**
LeetCode: 900+ problems solved, including **120+ Hard** problems

Projects

SyncSofa | TypeScript, React, Node.js, WebRTC Sep 2026 – Present
github.com/keshavsaini0311/syncsofa | Live Demo
Built synchronized YouTube playback, shared playlists and chat over WebSockets, with peer-to-peer WebRTC calls for up to **6 participants** and SQLite-backed room state. Validated with **95 unit tests** and **12 browser tests** covering calls, shared state and reconnects.
